The Leader in Precision Aerial Delivery

Sherpa™

Safe, Accurate and Cost-Effective Autonomous Cargo Delivery

- Autonomous parachute delivery
- 100 to 7,500 lb payload range
- Used by over 25 military and commercial services around the world
- Operational since 2003

Deploy up to 29,000 ft MSL

Programmable HALO/HAHO

Mixed-Mission Compatible

MMIST

Featuring the ability to easily incorporate multiple canopies, Sherpa™ gives you the flexibility to safely, precisely and cost-effectively deliver a wide range of payloads.

Choose your mission

With Sherpa™, just three canopies are sufficient to meet a payload range of 100 lbs to 7500 lbs / 45kg to 3400kg!

700 Sherpa System
Parachute: 400 ft² / 37.1 m²
Payload: 100lbs - 700lbs / 45kg - 317kg

2200 Sherpa System
Parachute: 1200 ft² / 111.4 m²
Payload: 600lbs - 2200lbs / 272kg - 988kg

7500 Sherpa System
Parachute: 3000 ft² / 278.7 m²
Payload: 2200lbs - 7500lbs / 988kg - 3400kg

Sherpa™ Ranger

- HAHO/HALO from up to 29,000 ft MSL
- Significant zero-wind horizontal stand-off
- Supports a range of glide ratios
- User selectable landing approach
- Autonomous guidance and control

Sherpa™ Provider

- ≤ 100 m CEP (50%) landing accuracy
- Remote-control option available
- Robust environmental qualifications
- Auto power-on safety feature on release
- Time, pressure or altitude-based drogue modes

Drop Sonde

MMIST's Drop Sondes are an advanced consumable atmospheric data sensor that measures wind speed, direction and other data

LaunchPADS™

LaunchPADS is a powerful & adaptable mission planner for the planning execution and analysis of cargo and personnel airdrop operations

Sherpa™

The MMIST Sherpa is a versatile Precision Aerial Delivery System designed to autonomously deliver cargo from high altitudes.

SkyLink

SkyLink is a system that enhances the safety and situational awareness of parachutists during adverse weather and night operations.
